BMHWA Manifesto Site, Round 2 — Analysis & Decisions

Companion to: the Round 2 Plan of Action (02_plan_of_action.md) **Date:** 15 May 2026

This document records the analysis of the Round 2 steering-committee survey and the five decisions it produced. The plan of action sets out *what* gets built and *when*; this sets out *why*.

*BMHWA is the **Black Mental Health & Wellbeing Alliance**. An earlier auto-generated survey summary mis-expanded it as "Black Maternal Health Awareness" — disregard that.*

1. Reading the survey

Six responses, all from steering committee members — Kadra, Nisa Chisipochinyi, Lynette Charles, Yansie, Ariel Breaux, Ruqia Osman. This matters: it is **steering-group consensus on what the site should do**, not research into how the wider community will use it. The people who rated "story/testimony submission" 5.0 are not the people who would submit testimonies. The survey tells us direction; it cannot tell us uptake.

Feature ratings (out of 5): story/testimony submission 5.00; pledge collection 4.83; campaign toolkit 4.83; data dashboard 4.00; signatory directory 3.80; press kit 3.17; members-only area 2.67. The last is last for a clear reason — the steering group does not need a tool for itself.

2. The moderation-load analysis

The question going into the meeting: if the site invites submissions, is moderating them *one hour a week, or wading through a hundred messages a day?*

Features split sharply by the ongoing human work they create:

- **Campaign toolkit** — downloads. Zero moderation.
- **Pledge collection** — a name, an org, a line. Light: spam-check, verify.
- **Story/testimony submission** — every item read, consent-checked,

safeguarding-checked, publish/hold decided. Heavy, and not automatable.

The highest-rated feature was the only one carrying a heavy, irreducibly human cost — and one no steering-group survey could size, because uptake depends on community behaviour, not committee opinion. Worse, personal mental-health disclosures carry a real safeguarding duty.

That analysis is what drove Decision 1.

3. The five decisions

- 1. The testimony feature is reframed as an organisational-action campaign.** Not personal mental-health journeys — instead, accounts of what *organisations* have done to progress manifesto commitments. A couple of seed examples are solicited, and the campaign runs in a defined, time-limited window. This removes the safeguarding duty and the unbounded open-inbox risk entirely, and converts an un-sizable feature into a curated, schedulable piece of work. It also absorbs the survey's "signatory case studies" suggestion and the previously-parked mailing-list survey ("Survey B"), now the campaign's intake channel.
- 2. Design is done in-house — no external commission.** No funding is available, and a pro bono commission carries unpredictable delay. BLKOUT designs the site using the Windrush typeface (a £15 licence — the plan's only cash cost) plus researched reference examples. The previously-considered designer approach is dropped.
- 3. The data dashboard moves up to Phase 2.** Built around a monthly refresh, mostly automated via a data agent and NotebookLM, with each refresh producing a factoid for the BMHWA newsletter. The newsletter's cadence is deliberate: it is the forcing function that keeps the dashboard from going stale.
- 4. No parallel translated site.** Most users have local translation tools, so a translated mirror would be largely symbolic. Instead the design carries a visible, deliberate recognition of the diversity of mother tongues across BMHWA's communities — acknowledgement of that plurality, rather than a parallel site in any one language, which would quietly rank the others.
- 5. Ariel Breaux is the single point of contact for content sign-off.** New content sections are approved by Ariel rather than the full steering committee, keeping the project's gates moving.

4. Strategic note — the dashboard is Critical Frequency in practice

Decision 3 is bigger than one site. A monthly-refreshed dashboard that turns government data into a public, drill-downable, newsletter-feeding artefact is the operational embodiment of the Critical Frequency reframe: *data invisibility as a political problem, not a comms challenge*. If the BMHWA dashboard proves the model, the same monthly pipeline serves BLKOUT's own health dashboard and Critical Frequency directly. Treat it as a prototype with reuse value, not a one-off feature.

5. What is still open

These are the decisions the plan of action still needs (see its Gates table):

- **Content brief sign-off** — Ariel, once BLKOUT synthesises the brief.
- **Dashboard data sources + monthly-cycle owner** — the one remaining gate with real weight; the owner role is light (~1 hr/month) but must be named.
- **Ongoing site editor** — needed for handover.
- **Campaign window dates + editorial lead** — light, schedulable.

- **Events page** — confirm BMHWA has events content to populate it.
- **Windrush licence** — confirm the £15 purchase is made before design begins.

For sequencing, gates, owners and timeline, see the plan of action.
